Value Chain Pollution & Carbon Reduction

Climate issues are vital to the survival and development of humanity. Climate warming and increasing environmental pollution are challenges faced collectively by humankind. The electronics manufacturing supply chain is long, product characteristics are complex, the scope of use is wide, and the usage time is long. The resulting carbon emissions and environmental impact are diverse, with the implied carbon emissions and environmental risks within the supply chain far greater than the direct impact. Therefore, we are determined to collaborate with partners to build a green supply chain, reduce environmental impact, mitigate climate warming, and strive diligently towards achieving green transformation goals.

Simultaneously, Luxshare Precision collaborates with the Institute of Public and Environmental Affairs (IPE), utilizing the IPE Blue Ecological Chain platform to accurately and efficiently obtain information on our own operations and supply chain environmental performance, in order to timely carry out monitoring and mitigation actions.

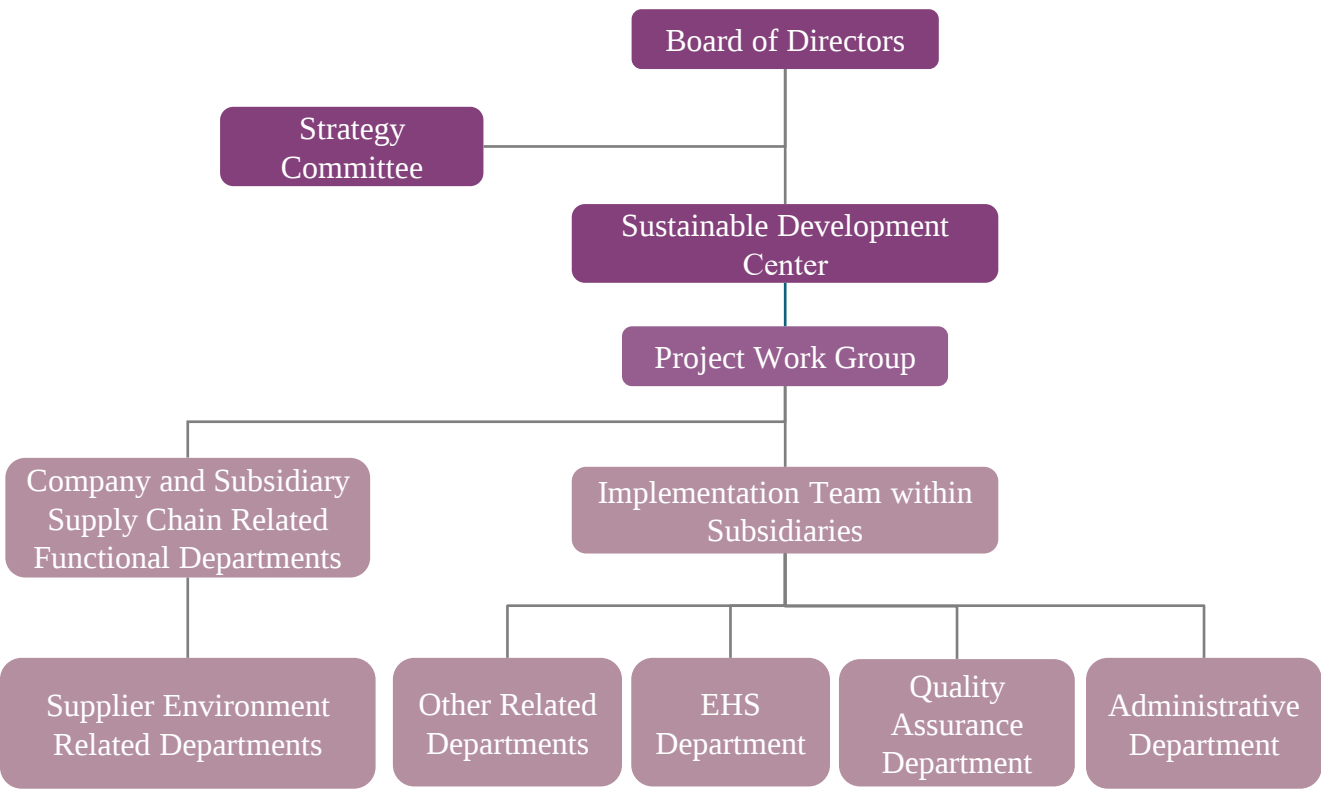

Green Supply Chain Project Plan

Green Supply Chain Strategy

Under the supervision and guidance of the Board of Directors, the Sustainable Development Center has established a Green Supply Chain Project Team, working together with internal and external stakeholders to carry out actions related to pollution reduction and carbon mitigation.

Green Supply Chain Management Structure

Our Actions and Progress

Luxshare Precision has collaborated with IPE for years, using the Blue Supply Chain platform to monitor and address environmental issues in its supply chain. We encourage suppliers to disclose environmental data and supports their performance improvement through training, working together to build a green supply chain.

Environmental Violation Dynamic Tracking

Luxshare Precision leverages the Blue Map system to dynamically monitor supply chain environmental violation information, reminding and assisting suppliers to complete improvements and remove violation records. We require suppliers to submit improvement plans for non-compliant items within 10 days of the violation record being published. Dedicated personnel are assigned to review, follow up on the implementation of improvement plans, and track the progress of record removal, providing one-on-one guidance to suppliers.

As the green supply chain project develops, historical records of supplier environmental violations have decreased year by year. As of the end of 2025 Q2, there were no environmental violation records for any subsidiaries on the IPE platform. We will continue to follow up and assist suppliers in improving their environmental performance.

As of the end of the Reporting Period,
Luxshare Precision:

Subsidiaries with environmental violation records

0

During the Reporting Period,
Luxshare Precision:

Suppliers assisted in removing environmental violations

36

Supply Chain Environmental Transparency Enhancement

Luxshare Precision hopes to leverage the Pollutant Release and Transfer Registration (PRTR) and carbon information modules developed by IPE to promote suppliers to strengthen environmental information disclosure, help them form a standardized and long-term environmental management mechanism, and systematically and comprehensively reduce the environmental impact of the entire value chain. In 2025, the Company plans to promote no less than 300 subsidiaries and suppliers to complete PRTR information disclosure, and no less than 280 subsidiaries and suppliers to complete carbon information disclosure. Furthermore, we continue to expand the influence of green supply chain actions, exploring the inclusion of secondary suppliers within the scope of actions this year to drive the comprehensive green transformation of the supply chain.

During the Reporting Period, Luxshare Precision:

Subsidiaries completed carbon data disclosure

64

Suppliers completed carbon data disclosure

220

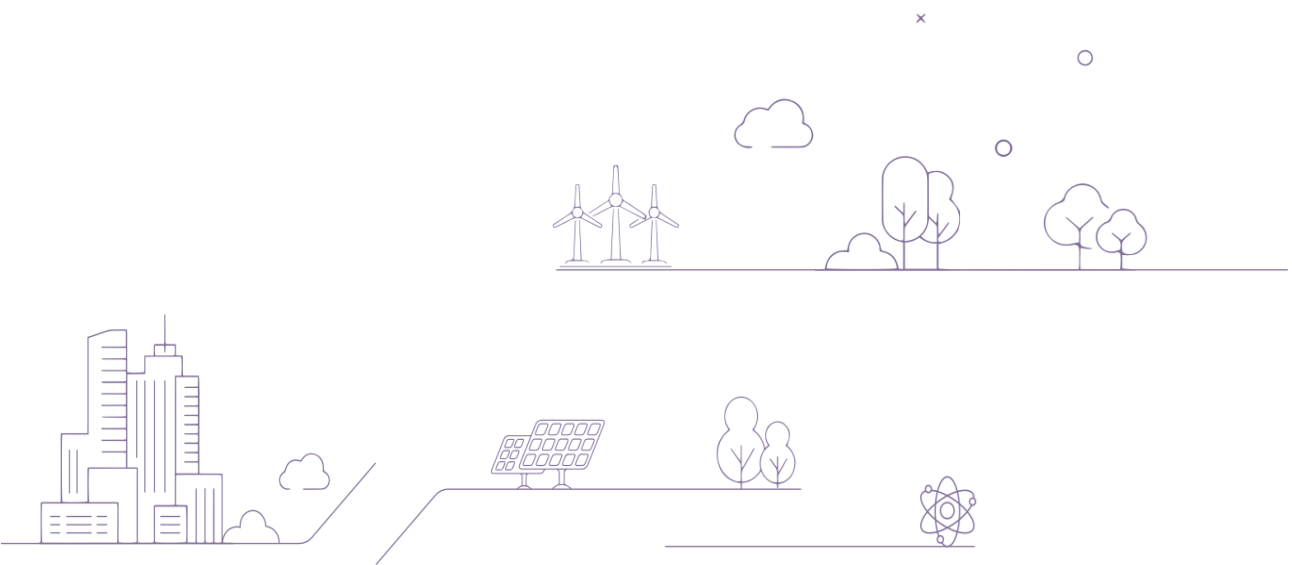

Subsidiaries completed PRTR disclosure

64

Suppliers completed PRTR disclosure

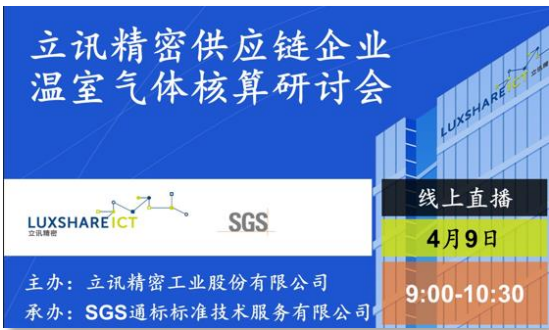

249

Supplier Training and Visits

Luxshare Precision collaborates with IPE to regularly provide specialized training for subsidiaries and suppliers, introducing the latest developments in environmental compliance, dual carbon and energy management actions, and other content. As of Q2, **we had organized and completed 9 training sessions**. Additionally, Luxshare Precision carefully selects core suppliers to conduct on-site visits, promote the connotation of the Company's green supply chain initiative, conduct on-site communications to obtain supplier feedback and solve practical difficulties, effectively implementing green supply chain actions.

In 2025, Luxshare Precision:

Special Trainings for Suppliers

Long-term Commitment

Faced with the increasingly urgent climate challenges and resource pressures, Luxshare Precision always maintains a forward-looking strategic vision, considering the construction and continuous optimization of the green supply chain system as the solution and unwavering commitment. Suppliers, as indispensable and solid partners in our journey, play a crucial role. Therefore, we steadfastly choose to walk the path of sustainable development shoulder to shoulder with suppliers, working together to build a green supply chain, and striving tirelessly for a better, sustainable future.
